"Nordicom, the best wireless solution"

NORDICOM

Securalert™-RF

SUPERVISED AND WIRELESS ALERT SYSTEM

WHAT IT IS?

It is an alert system (transmitter) that is:

- Wireless.
- 3 to 5 times more powerful than the average transmitter of the same type.
- Supervised (continuous verification of the transmitters, the performance of the system and for the detection of problems).
- Connected to receivers that can relay calls to pagers.

Choices of different centrals:

Central:

10 000 zones...

M900

16 zones

64 zones

Fixed or wireless buttons:

Private pagers:

Best:

- To improve or complement existing systems.
- For specialized centers that have no wiring but wish to install totally supervised wireless alert systems.
- For specialized centers that want to expand and avoid the wiring of the installation

Specific Benefits:

- Incomparable power (can cover a building of four (4) stories or more).
- Easy installation.
- Possibility of increasing the number of transmitters.
- Exceptional reliability due to the constant supervision.
- Receiver (display panel) can be moved easily.

Specifications panel display:

- 16 to 64 transmitters (alert buttons) per panel.
- Alert bell and reset button integrated to the display panel.
- Complete supervision of the system (state of transmitter battery, good functioning of the system, detection of problems).

Specifications computer M900:

- Almost unlimited number of transmitters (alert buttons)
- Graphical screen with zoom .
- Historical of the events.
- can be integrated to the computer network.
- Send alarm to pagers, emails, dry contacts, etc...
